Go Viral To Get Over 640K Views On X In 24 Hours

🜩 Win Type	Engagements Traffic
⑦ Category	X (Twitter)
 Efforts 	***
• Time Required	25 Minutes
# Number	1

This is a **demo trick of the iGrowthful SMM Strategies**: <u>https://igrowthful.com/smm-strategies/</u>

By the way, let's get started...

Being viral on social media is not an easy task.

However, if you can post the right one at the right time, going viral is inevitable. Going viral has several benefits. For example,

- Get more followers
- Get more reach and engagement
- After all, the website gets a lot of visitors

For example, see one of my recent viral X (Twitter) posts,

← Thread

Google Search algorithm leaked today.

It outlines 2,596 modules with 14,014 ranking features related to various Google services.

Here's what (13 things) we found:

ModuleName AbuselamAbuseType	ModuleDescription Name	Туре	Description
	id	String	
AbuseiamAbuseType	subtype	String	Optional client specific subtype of abuse that is too specific to belong in the above enumeration. For example, some client may want to
AbuseiamAgeRestriction AbuseiamAgeRestriction	ageYea		This restriction applies if the user is between (min_age_years, age_years) years old.
AbuseiamAndRestriction	child	list(AbuseiamUserRestriction)	This restriction applies if all of the children apply.
AbuseiamClient	A client is be a Google product, or subproduct that id	String	mis resultation appres in an or the ormanent appry.
AbuseiamClient	A client is be a Google product, or subproduct tha subserv		The name of the subservice within a client. This subservice can be used to affect the flow of decision script, or selection of backend of
AbuseiamConstantRestriction	type	String	A constant of type TRUE always applies, and of type FALSE never applies.
AbuseiamContentRestriction	Pair of Verdicts used for ProjectR ageigeo gating. adminV	erdict list(AbuseiamVerdict)	Takedowns specified by admins via AbuselAm
AbuseiamContentRestriction	Pair of Verdicts used for ProjectR ageigeo gating. userVer		User-specified takedowns
Notes in the second sec	Backends return Evaluations to AbuselAm. One o abuseT		
AbuseiamEvaluation AbuseiamEvaluation	Backends return Evaluations to AbuselAm. One o backen Backends return Evaluations to AbuselAm. One o comme		Who creates this Evaluation. This field is required. Backends can choose to put some debug info in addition to abuse, type, score, and status.
AbuseiamEvaluation	Backends return Evaluations to AbuselAm. One o comme Backends return Evaluations to AbuselAm. One o miscDa		Backends can choose to put some debug into in addition to aduse_type, score, and status. This field is used to store miscellaneous information that Backend might provide. If you find youself here considering to use this field,
AbuseiamEvaluation	Backends return Evaluations to AbuselAm. One o process		When the evaluation was processed by the decision script.
buseiamEvaluation	Backends return Evaluations to AbuselAm. One o region	list(AbuseiamRegion)	The list of regions where the evaluation applies.
buseiamEvaluation	Backends return Evaluations to AbuselAm. One o score	float	A construction of the second se
buseiamEvaluation	Backends return Evaluations to AbuselAm. One o status	String	
buseiamEvaluation	Backends return Evaluations to AbuselAm. One o target	AbuseiamTarget	
buseiamEvaluation	Backends return Evaluations to AbuselAm. One o timesta	mpMicros String	When the Evaluation was generated.
buseiamEvaluation	Backends return Evaluations to AbuselAm. One o userRe		A boolean expression tree used to define the restrictions where the verdict applies. Please use java/com/google/ccc/abuse/abuseian
buseiamEvaluation buseiamGeoRestriction	Backends return Evaluations to AbuselAm. One o version	String list(AbuselamGeoRestrictionLoca	Version of Backend. For rules, this string is the only way to differentiate between them.
buseiamGeoRestrictionLocale	A node representing a table of regions and restrict locale location	list(AbuseiamGeoRestrictionLoca String	The location where the restriction applies. Defaults to the "The world". See go/ii.
AbuseiamGeoRestrictionLocale	restricti		The UserRestriction that applies to this location. If not specified evaluates to true.
buseiamHash	Information about various hashes that can be con hash	String	64 bit hash in the hex form.
AbuseiamHash	Information about various hashes that can be corr type	String	
buseiamNameValuePair	name	String	
buseiamNameValuePair	nonUtte		
buseiamNameValuePair	value	String	
AbuseiamNotRestriction	child	list(AbuseiamUserRestriction)	This restriction applies if the child does not apply. Only one is allowed. "repeated" is used to avoid breaking Sawzall (See b)6758277
AbuseiamOrRestriction AbuseiamRegion	child	list(AbuselamUserRestriction)	This restriction applies if any of the children apply.
AbuseiamHegion AbuseiamSpecialRestriction	region A SpecialRestriction is a standardized UserRestric type	String	This is a CLDR Region Code: http://wiki/Main/IIIHowTo#using_region It is used to denote the region affected by a verdict.
buseiamTarget	A opecial restriction is a standardized obernestic type	String	
buseiamTarget	type	String	
AbuseiamUserNotification	A structure used to configure a notification to a us channel	String	
buseiamUserRestriction	Describes restrictions on where the verdict applier ageRes		
buseiamUserRestriction	Describes restrictions on where the verdict applier and Res		Operators
buseiamUserRestriction	Describes restrictions on where the verdict applier constant		Constant
buseiamUserRestriction	Describes restrictions on where the verdict applier geoRes		Leaf Nodes
buseiamUserRestriction	Describes restrictions on where the verdict applier notRest Describes restrictions on where the verdict applier or Bestr		
buseiamUserRestriction	Describes restrictions on where the verdict appliet orrestr Describes restrictions on where the verdict appliet special		
buseiamVerdict	Verdict against a target. AbuselAm generates a ve client	AbuseiamClient	Target client of the verdict. It can be used to differentiate verdicts from multiple clients when such verdicts are processed in one com
*useiamVerdict	Verdict against a target. AbuselAm generates a ve comme		Additional info regarding the verdict.

If you want to make a post viral, you need to remember 3 things.

- You have to choose a topic that has never happened before
- You have to choose a topic that people have a lot of interest in
- You have to choose a topic that can go trending immediately

For example, if you look at my viral X post image above, you will see that this post was about the Google algorithm leak.

That is, no one has ever leaked the Google algorithm before, which is why people are so interested in knowing that it will even go trending immediately.

And yeah, to understand these things, you also need to use common sense.

Some more examples that if you post, they can instantly go viral:

- 1. Facebook Algorithm Leak
- 2. X (Twitter) Algorithm Leak
- 3. YouTube Algorithm Leak
- 4. Pinterest Algorithm Leak
- 5. And many more

That means, you have to choose a topic that has people's interest, but no one has posted about it before. And of course that must be true.

So, in the future, if you find something that people have a keen interest in, but no one has posted about before, you can post about it on social media.

By doing this, your post will go viral.

Love the trick?
